1 in 3 Americans will have diabetes by 2050.

Over 9.3% of the U.S. population has been diagnosed with diabetes, and the growth trends don't look good. In fact by 2050 the CDC now estimates that nearly 1 in 3 Americans will be diagnosed with diabetes in their lifetime. With over 29 million Americans fighting this disease daily, and with no cures in sight, diabetes is taking more lives than ever. Even with new advances in medical and diagnostic technology, diabetes remains the 7th leading cause of death in the United States.

The Dangers of Having Diabetes

Heart Disease

Blindness

Kidney Disease

High Cholesterol

Skin Problems

Stroke & Fainting

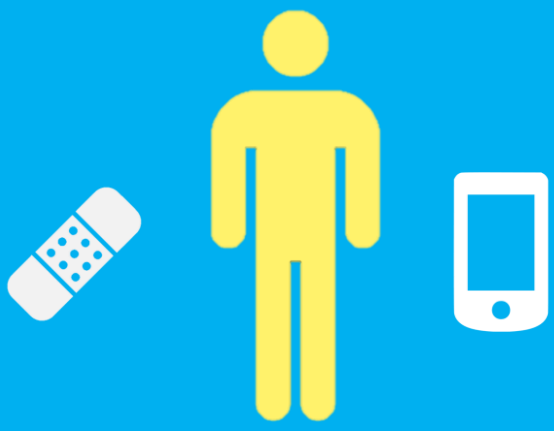

High Blood Pressure

The Problem

Diabetics are at abnormally **high risks for fainting** due to **blood sugar levels** being either too low (hypoglycemia), or too high (hyperglycemia). Once blood sugar levels get out of control, diabetic patients can quickly slip into what's known as a comatose state.

If a diabetic faints, they are at serious risk of fatal conditions. That's why it is vital that diabetics receive treatment immediately.

Our Solution

Introducing Smartlert™

Our technology starts with a simple, flexible, breathable, noninvasive water-proof **patch or wristband that is applied directly on the skin of a diabetic**. This patch can be applied anywhere on the body and lasts **for up to 30 days**. While active, the patch **monitors the user through innovative Dielectric Spectroscopy technology** and is capable of **detecting any irregularities that would result in fainting.**

Through a smartphone application the user will not only be able to check their status throughout the day… but more importantly, if anything were to go wrong rendering the **diabetic user unconscious. The system would automatically notify and alert emergency personal.**

Empowering the User with Early Detection Diagnostics and Alert System Technology

Smartlert™ is the first rendition of a new and innovative Dielectric Spectroscopy technology introduced by Alertgy™

Interested In Investing?

Alertgy™ is **currently raising capital** and seeking experienced board member counsel. **For all business inquires please contact Marc at (727) 455-9076.**
